# VETRAFIN H-SERIES

## VetraFin H-Series

---

Elegant, seamless and transparent with clean horizontal lines, Sentech's proprietary VetraFin H-Series system is intended for use in horizontal fin applications. Ideal for openings with a large aspect ratio, the VetraFin H-Series horizontal fins can be designed using a variety of materials, including glass, stainless steel and aluminum. The horizontal fins also provide solar shading and reduce the need for artificial cooling- and thus energy consumption.

The VetraFin H-Series System can be used to design facades of various glass types, including monolithic, laminated and insulated glass, and enables the design of eco-friendly applications with the highest performance values in the marketplace.

- 
- 316 stainless steel construction
  - Walls with column spacing up to 40' wide
  - 100' tall applications
  - Recommended horizontal fin spacing = 10' to 16'
  - 316 stainless steel suspended rod construction
  - Use w/ all glass types (insulated, laminated, monolithic)
